Dear Readers,

Summer is just around the corner! As people begin planting or preparing backyard gardens, the BSSE project team will be in the Project Area collaborating with landowners along the Preferred Route.

The BSSE project continues to move through the North Dakota and South Dakota regulatory review processes. On April 1, 2014, the ND Public Service Commission (NDPSC) held a public hearing in Ellendale. On May 20, 2014, the SD Public Utilities Commission (SDPUC) held an additional public hearing in Aberdeen. On June 10, 2014, SDPUC is holding an evidentiary hearing.

We appreciate everyone’s input on the project. If you have questions or concerns regarding the regulatory processes, right-of-way, or engineering, we encourage you to reach out to the BSSE project team or visit our website at www.BSSETransmissionLine.com.

The BSSE project team

NDPSC Public Hearing
On April 1, 2014, the NDPSC held a public hearing on the BSSE project in Ellendale, North Dakota. We appreciate everyone’s participation in the hearing.

The Commissioners and PSC staff asked questions related to the project, the need identified by the Midcontinent Independent System Operator (MISO), and the progress of the South Dakota portion of the project.

The project team addressed the questions from the Commission and the electronic hearing record is available under the docket on the Commission’s website. The BSSE project website includes a link to the hearing record for review.

Permitting Update

Additional SDPUC Public Hearing
On May 20, 2014, the SDPUC held an additional public hearing on route modifications in Aberdeen, South Dakota.

As a result of landowner involvement, the BSSE project team made route modifications to certain areas of the project, which resulted in additional landowners within a half-mile of the preferred route. A letter was mailed to these additional landowners to inform them about the hearing.

The BSSE project team provided a project overview and discussed the route modifications. The Commission and the project team listened to questions and statements from attendees. Again, we appreciate everyone’s participation.

SDPUC Evidentiary Hearing
June 10, 2014
Comments can be provided by writing a letter to the SDPUC. Comments may be submitted in writing to:

Field Surveys
This fall, the BSSE project team expects to have staff conducting environmental field surveys along the route.

These surveys allow the project team to identify resources along the route prior to construction.

All landowners will be contacted prior to field staff conducting surveys on private property.

FREQUENTLY ASKED QUESTIONS

What is an easement?
An easement is the granting of the right for another person or party to use a specific portion of one’s property for a specific purpose while retaining legal title to that property. For the BSSE project, an easement is acquired for a specific 150-foot right-of-way to build and maintain a transmission line.

What is the difference between standard and overhang easements?
Standard easements are used for property on which one or more structures will be installed within the easement.

Overhang easements are used for property on which a portion of the 150’-wide easement would fall but on which structures will not be installed. The term overhang easement is used because a portion of the structure (cross-arms, insulators, conductors) may hang above a portion of the property.

How did the project determine land values for easement payments?
The project’s easement payments are based on land values determined by data gathered from recent sales within the routing area, as well as land values compiled for use by the National Agricultural Statistical Service.

Is the project offering a different payment for a standard easement versus an overhang easement?
Yes. A standard easement payment is more because a structure will be installed on the property. An overhang easement is less because a structure will not be installed on the property.

The standard easement will be paid at 80% of the land value, whereas the overhang easement will be paid at 40% of the land value.

Land value for land-use type(s) present X Easement acreage X 80% for standard or 40% for overhang = Easement Payment

Project Basics
• New 345 kV transmission line
• End points: proposed Ellendale 345 kV substation and proposed Big Stone South substation
• Project owners: Montana-Dakota Utilities Co. and Otter Tail Power Company
• In service in 2019
• Approximate cost: $293 million to $370 million
