

# What is a multi-value project (MVP)?

MVP projects like BSSE help lower prices across the entire market by transporting lower-cost energy from supply areas to demand areas.

Renewable Portfolio Standards (RPS) introduce large amounts of low-cost wind generation in the west, where wind resources are abundant. MVP projects transport this energy to areas in the east with less wind resources to help them meet their RPS goals.

MVP projects will alleviate congested areas and provide needed upgrades to increase regional reliability.

### MAP KEY

- Higher market prices
- Lower market prices
- Higher wind speeds
- BSSE Study Area
- Proposed MVP project

For additional information, visit the MISO website at [www.midwestiso.org](http://www.midwestiso.org).

Specific information on the MVP projects is available on MISO's "What We Do" page under "One-Pagers".

MVP projects will benefit the regional economy by creating jobs, addressing reliability issues cost-effectively, and lowering market prices across the region.

## BSSE was designated an MVP because it provides:

- Regional reliability
- Economic value
- Enables integration of renewable energy into the system
